

NOTE: All transducers are built at the factory as shown here, looking into the bored end (for the shaft), with the tension force direction always at the 6:00 position. If the connector position is to be other than at 6:00, it must be specified on the purchase order. Use the examples above as a guide.

SHOW US HOW YOU WANT YOUR TRANSDUCERS "AS INSTALLED" (SEE EXAMPLES ABOVE). REMEMBER YOU WILL GET A MIRROR IMAGE OF THIS FOR THE OPPOSITE SIDE OF THE MACHINE.
